RSA Warmup

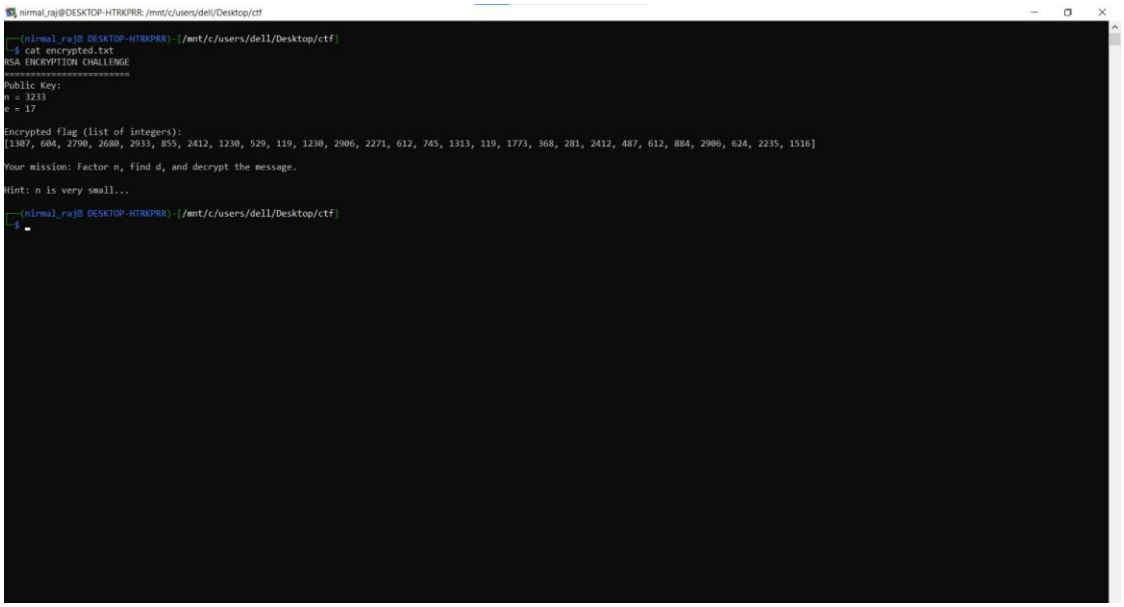

Category : Crypto

Description :

This message was encrypted with RSA, but the key seems suspiciously small. Can you factor the modulus and decrypt the message?

Remember: RSA security relies on the difficulty of factoring large numbers.

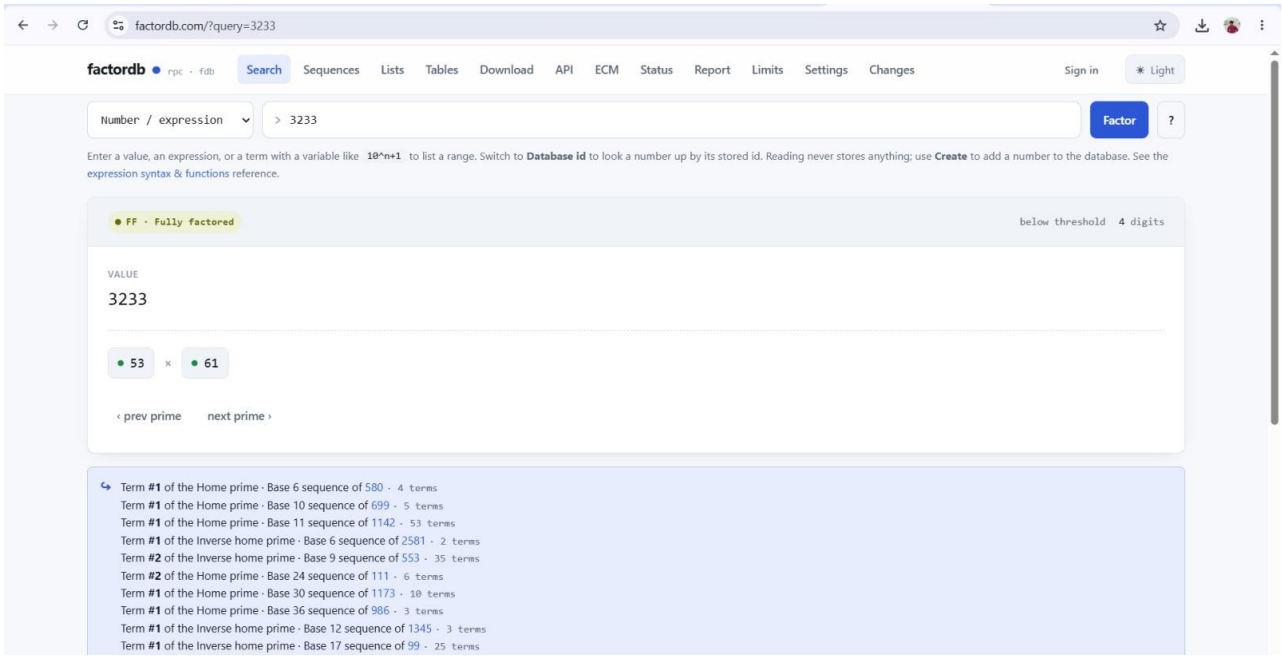

Step 1 : Downloaded the file and viewed it .

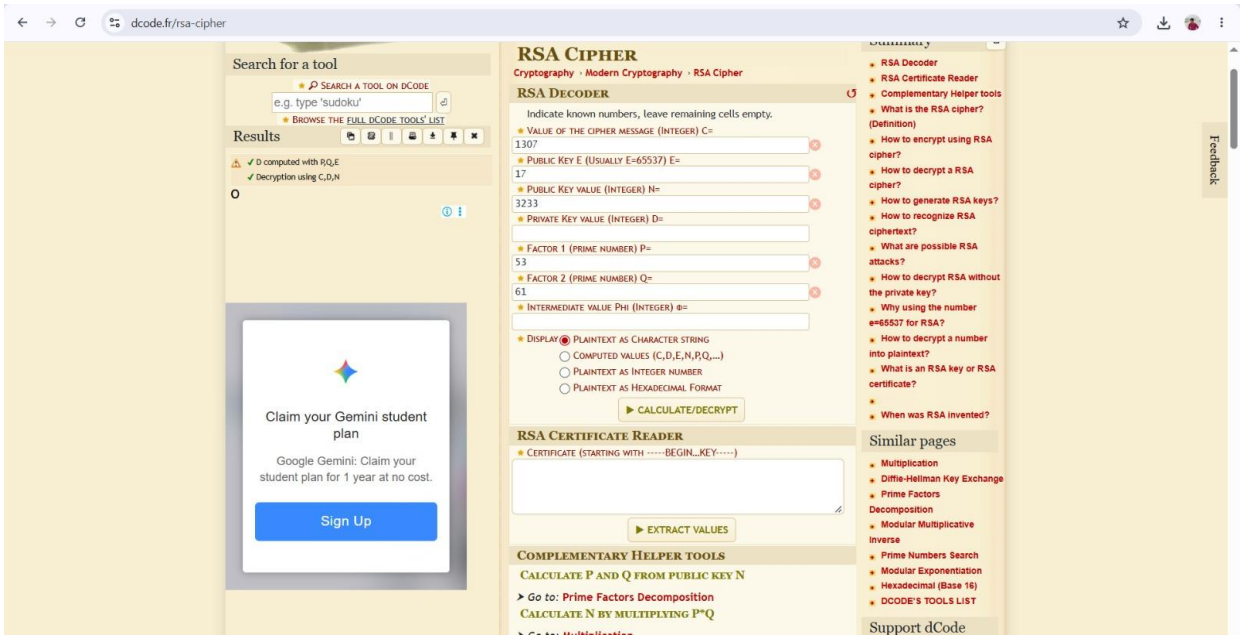

In this we have n , e and cipher text values
Hint 1 : n is small

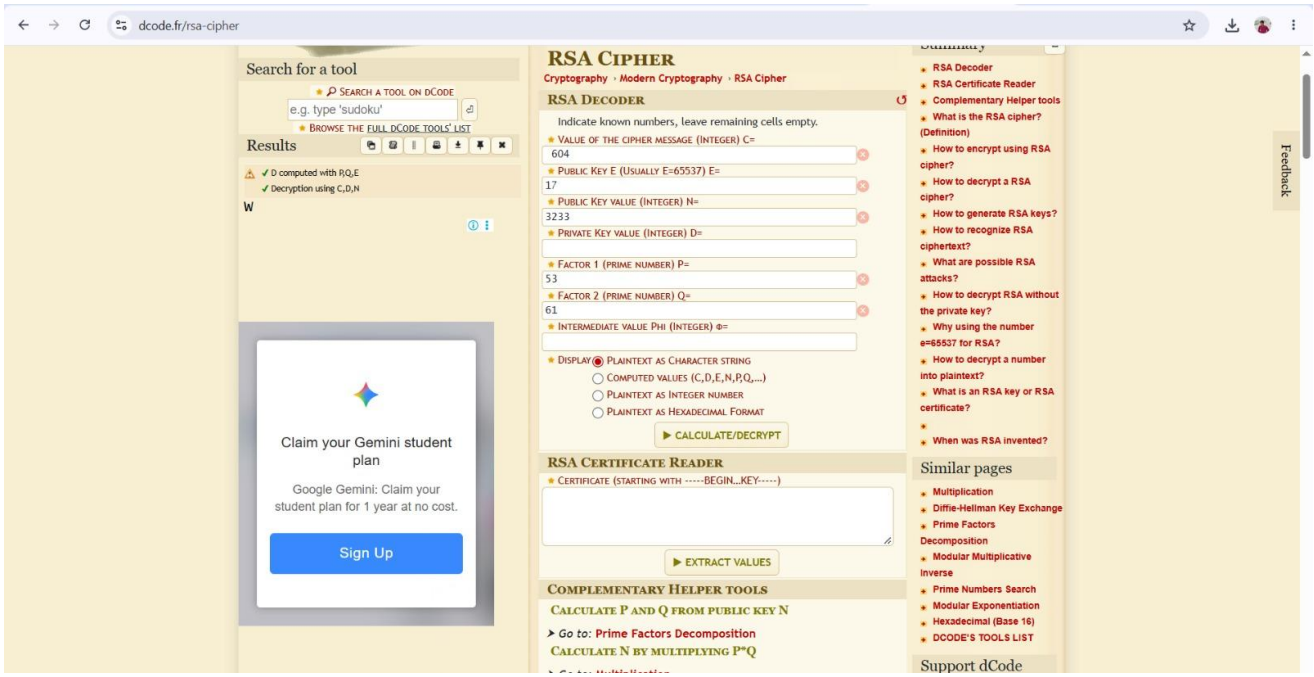

Hint 2 : find p,q and d after then decrypt the message

Step 2: Found the p and q by factoring the n value

Step 3 : Using the p and q value directly decrypting the message using the decodefr (rsa cipher)

Similarly solving each and every cipher text with this , we get full decrypted message (flag)

Flag : OWASP{rs4_s1mple_d3crypt10n}
