Rev – Reverse

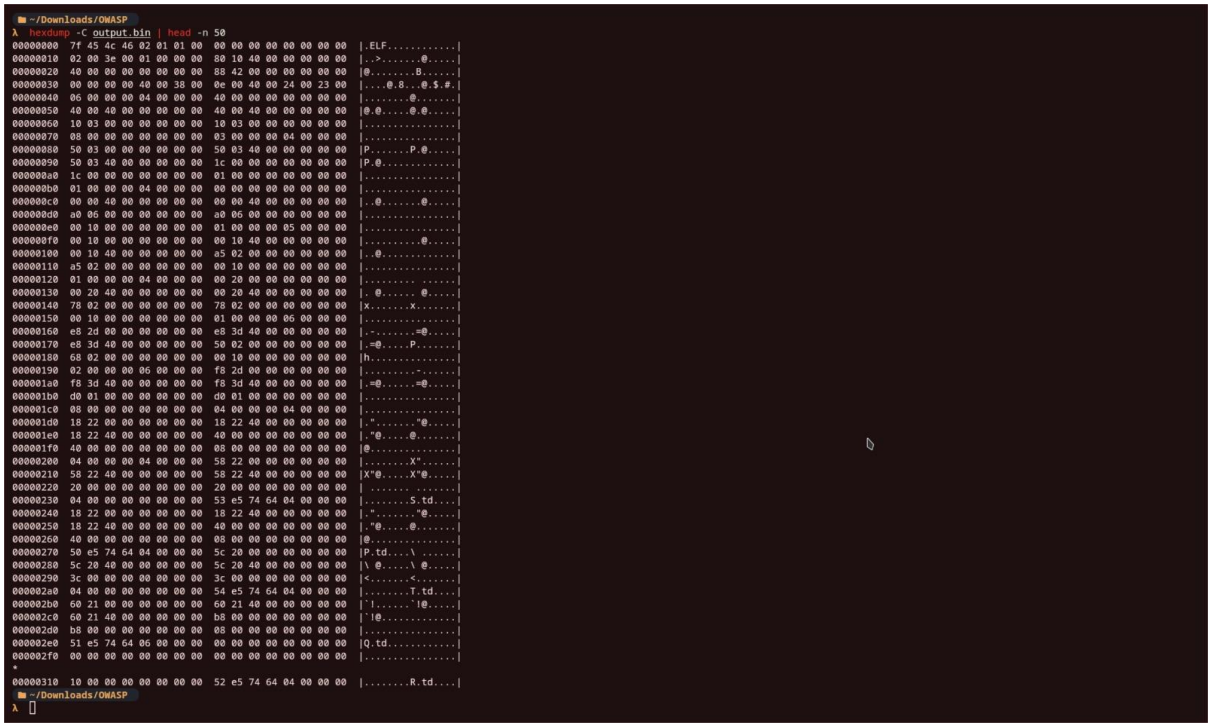

Step 1 - Displaying string data display everything in reverse

Step 2 - Hexdump confirms that complete hex data is in reverse

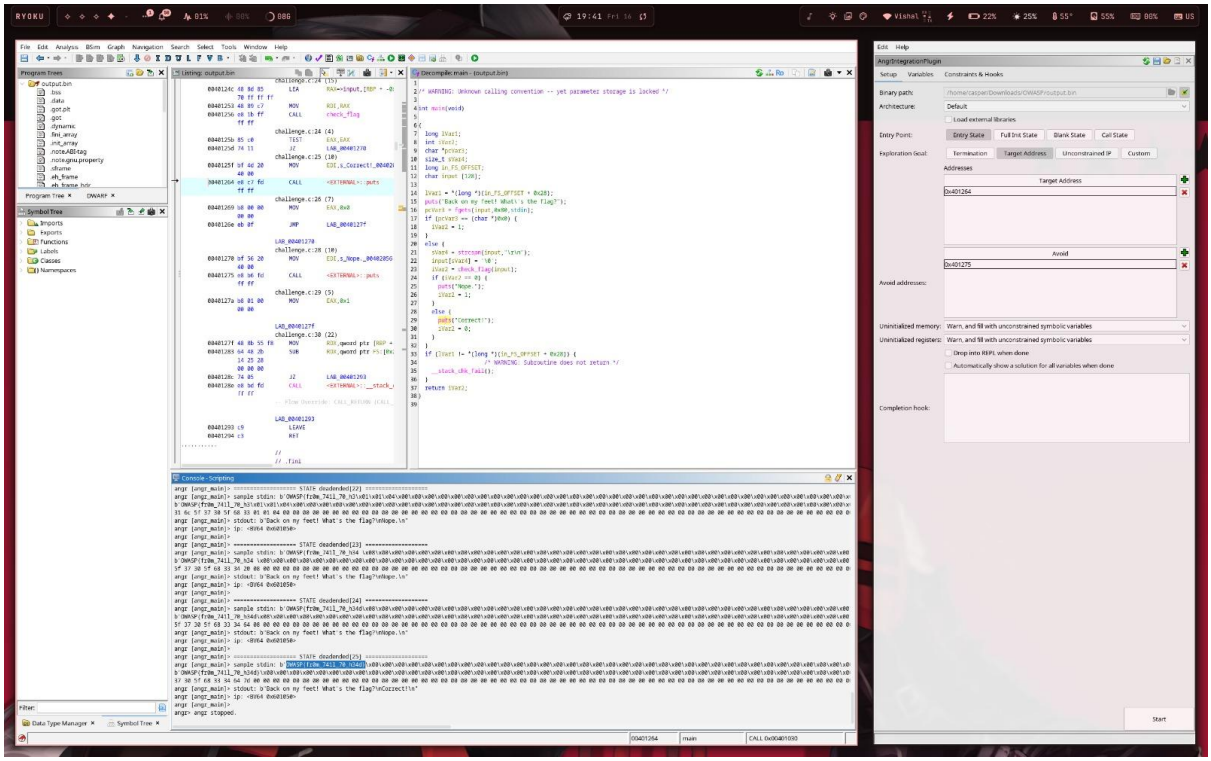

Step 3 - xxd -p chall | fold -w2 | tac | tr -d '\n' | xxd -r -p > output.bin, this reverses the whole binary file and saves as output.bin

Step 4 - Open the output.bin in ghidra to reverse engineer it

Step 5 - Used angr GIAT plugin for ghidra

Step 6 - Select entry state to start angr from stat of the binary, add avoid address as 0x401275 and target address as 0x401264 (Respective if else address of binary jump)

Step 7 - This will display the text(flag) to pass the jump statement and reach target address

Flag - OWASP{fr0m_741l_70_h34d}
